(54) INK JET RECORDING MATERIAL

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an ink jet recording material which meets high-speed printing end enables attainment of an excellent ink absorbing property and an excellent image quality.

SOLUTION: In regard to an ink jet recording material prepared by providing at least one recording layer containing a pigment and an adhesive on a base, the sped of absorption on the occasion when a solution

prepared by mixing water/diethylene glycol in the ratio of 70:30 is dropped on the surface of the ink jet recording material whereon recording is made is set to be 100nl/sec. or above. Besides, at least one recording layer containing the pigment and the adhesive is provided on the base and, moreover a glossy layer containing a polymer resin prepared by polymerization of monomers having ethylenic unsaturated bondings is provided on the recording layer.
